

Thread Forming Screw For Metal

FIX-ALUTRAX SCREW

Screw For Light Alloy Materials

It is a newly designed form of self-tapping screws for light alloy materials provided in alternative materials with a wide range of coating and coating options.

- Compatible with metric threads
- Provides a high connection power
- Loss of low preload under high dynamic and thermal load
- Low installation torque for safe mounting with working range
- Excellent self-locking vibration resistance
- High peel torque

Compared to metric screws, up to 40% cost savings can be achieved. Self-aligning fasteners offer the advantage of direct mounting to the casting holes, instead of pre-drilling, threading and metal shaving for later preparation of the drill for a metric screw. **FIXALUTRAX**, does not only create cost in a single step, but also benefits in time efficiency.
